

## HEA PROFILES

It is the name of steel and ferrous metals that is protected by high-energy atmospheric use.

The profile is produced by analogy with the letter H and these profiles are produced especially as wide-angle.

| Profils<br>HEA | Dimensions en mm |     |     |      | Poids en<br>kg/ML |
|----------------|------------------|-----|-----|------|-------------------|
|                | C                | D   | B   | A    |                   |
| HEA 100        | 96               | 100 | 5   | 8    | 16,7              |
| HEA 120        | 114              | 120 | 5   | 8    | 19,9              |
| HEA 140        | 133              | 140 | 5,5 | 8,5  | 24,7              |
| HEA 160        | 152              | 160 | 6   | 9    | 30,4              |
| HEA 180        | 171              | 180 | 6   | 9,5  | 35,5              |
| HEA 200        | 190              | 200 | 6,5 | 10   | 42,3              |
| HEA 220        | 210              | 220 | 7   | 11   | 50,5              |
| HEA 240        | 230              | 240 | 7,5 | 12   | 60,3              |
| HEA 260        | 250              | 260 | 7,5 | 12,5 | 68,2              |
| HEA 280        | 270              | 280 | 8   | 13   | 76,4              |
| HEA 300        | 290              | 300 | 8,5 | 14   | 88,3              |
| HEA 320        | 310              | 300 | 9   | 15,5 | 97,6              |
| HEA 340        | 330              | 300 | 9,5 | 16,5 | 105               |
